Innovative Network Services

PRODUCT  
PORTFOLIO

# C365 PRODUCT PORTFOLIO

## 4G/5G

We offer the widest portfolio of 4G and 5G SIMs to provide primary, fail-over and performance enhancing Internet connectivity, across all UK networks – EE,

O2, Three and Vodafone, and across all EU countries. DDOS Protection is standard and Fixed IP is optional. Choose from a range of data tariffs to suit your requirements.

## Always-On Internet

Higher performance, faster and more reliable Internet connectivity, either at a fixed location or as a portable unit. Ideal for businesses needing to access

cloud applications at all times, remote locations needing an Internet connection, for boosting an existing connection to improve performance or as a pre-Ethernet solution.

## Private SD-WAN

Simple network control to manage workplace applications and connect sites. Control your Wide Area Networks efficiently, securely and with agility. Software

defined technology provides an easy way to remotely manage private multi-site networks in real time.

## IoT Infrastructure

We design, build, manage and provide IoT connectivity across the following network technologies: M2M, LoRaWAN, NB-IoT, LTE-M, Sigfox and Wi-Fi. Analysis of

IoT data can result in cost reductions and business efficiencies. The devices relay data, without the need for human interaction, which is collected and analysed.

## Fixed Lines & MPLS

We have full national and international ISP capabilities, and own and operate a highly secure and scalable Core Network in multiple UK and international

datacentres. This gives us massive capability to exceed your expectations for specialist network services.

## Hardware

Routers are ideal for immediate business broadband, or to provide resilience to your fixed line services. We offer a range of products including 4G/5G routers and

antennas to help you set up reliable Internet connectivity. Wi-Fi set-up is possible from many of our routers. Hardware is also available on a rental basis.
