

THIS IS THE CONTINUUM STORY

Comms365 has been supplying a state-of-the-art service to its partners and customers for their Internet requirements at new sites and critical locations for more than 6 years. This service allows them to simply bring up an Internet connection with high speeds wherever they need it: new sites; sites under construction; sites with fibre breaks; back-up for critical sites.

It's as simple as plug and play. The solution itself is an easily deployable, mobile ruggedized unit that can be wheeled onto a site and provide instant connectivity of up to 300Mbps. Our customers have been deploying Continuum across Europe with amazing results and fantastic operational benefits. It gives them the capability to get sites and offices up and running in a matter of days and meet site launch deadlines. It's easy to understand why this is so critical to any business and the potential revenue loss when a site is off-line.

Continuum bonds multiple data SIMs from a selection of mobile operators to form a much larger Internet connection that is secure, resilient and stable.

CONTINUUM PROVIDES FAST AND RELIABLE INTERNET IN ANY LOCATION, WHEREVER IT IS NEEDED

IT Managers have found Continuum to be **indispensable** when new sites have had their fixed line installations delayed as the solution is fully **capable of maintaining connectivity** across any type of site until its fixed-line services become available. Continuum **overcomes the delays** that any construction site, office, warehouse, distribution or fulfilment centres may face by providing Internet access immediately. The unit can be rolled onto site, powered up and be ready to go in a short time frame.

A common problem when a site is under construction is that the fixed line may **not** be **ready** for service by the time the site goes live (common issues such as wayleave, blocked ducts or lack of available fibre plant). Having a Continuum in place **ensures** that the **site goes live** on the planned date removing operational and financial impacts.

Sometimes, **fixed lines** can **fail** (the fibre line might be cut by external forces, such as 3rd party JCBs) or environmental factors such as flooding, which can unfortunately result in the Internet going down. A Continuum can be **easily powered up** to cover the period whilst the fixed line is repaired, and **downtime is reduced** significantly.

If a business is affected with seasonal peaks, a Continuum unit can be used to seamlessly **boost Internet performance** at the site, when it is required. It is perfect to **cover** these **seasonal peaks** in demand. Units can be deployed to sites within 3-4 days, dependent on requirements.

Additional benefits mean that the unit can provide added **resilience** to your Internet access by using a combination of fixed line and mobile data from a selection of carriers. When one carrier suffers an outage, the other connections take the weight.

WHY IS CONTINUUM AN ASSET TO ANY BUSINESS?

USE IT FOR...	BECAUSE...
Pre Ethernet or Fixed Line Outages	Overcome delays to operations, caused by fixed line installation delay or line breaks.
Boost Internet Performance	Perfect to cover seasonal peaks in demand or boost performance on low bandwidth connections such as ADSL and FTTC.
Resilience and DR	Plug fixed line into unit once it is installed and Continuum is kept on site for disaster recovery purposes and to add resilience when fixed lines suffer outages.

CONTINUUM FEATURES	ALLOWING YOU...
Portable and Robust Build	Easy to move from site to site to maximise usage.
Carrier Agnostic – 4G	Ensuring that there is the best chance of obtaining coverage wherever the unit is deployed. We can supply SIMs from all carriers.
Swift Deployment of Unit	To order the unit, it can then be built, configured and delivered to site in 3 – 4 days, dependent on requirements. Orders can be expedited.
Fully Supported Service	To get support 24/7 from the Helpdesk
Quality of Service (QoS)	To allow you to prioritise your Internet traffic.

HOW COULD YOUR CUSTOMERS USE IT?

Comms365's Continuum service is being used with great success across a number of sectors. It is deployed in the UK, Europe and North America and has the capability to work worldwide.

It is available in different sizes dependent on the connectivity requirements at the site. Project design and assistance can be given when scoping out any requirement.

SECTOR	USE CASE
Offices	Office Internet access to overcome the disruption of delayed installations.
Media	Emergency deployment of Internet access to support film broadcasting and streaming.
Events	In remote locations for events and for filming purposes.
Construction	On construction sites to support site workers with communications and stock control.
Warehouses	In new warehouses to support stock management and order fulfilment.
Security	To remotely access CCTV around business premises for security.

COMMS365 OVERVIEW

Comms365 is an innovative, agile and responsive network services company and was founded in 2008. Working with partners and resellers, our team of experts in the fields of mobile data, IoT, Bonded Internet and SD-WAN deliver cutting edge, innovative products to SMB and enterprise customers.

We help businesses solve complex Internet connectivity challenges including:

- Reducing downtime due to communications problems
- Providing resilience to existing connectivity
- Building and managing multi-site networks efficiently
- Employing new technologies to deliver actionable data

“There is nothing else like Continuum; It really was ultra-fast deployment for our customers.”

Darren Smith, Managing Director, Opious

“Not only did we need a solution that would work effectively in different environments, but a team who fully understood our requirements. Comms365 ticked all the boxes.”

Graeme Cross, Business Systems Director
Morrison Utility Services
