

## Tangle Teezer

A disaster recovery solution for Tangle Teezer provided a temporary, portable, managed bonded 4G solution. Enabling instant Internet connectivity whilst waiting for a fixed line to be installed.

"Comms365 Continuum is a very reliable and robust solution in the absence of a fixed-line connection. Having moved to a new location and a larger office, we were unable to find a suitable Internet connection while we waited for our fixed line to be installed. It actually took a number of months to arrive.

Continuum got us out of a big hole. It meant that we could continue to operate immediately, with the solution being implemented within a day; proving extremely valuable to our business. Whilst we are now up and running with a fixed-line infrastructure, if our lines ever went down in the future, we wouldn't hesitate to use Comms365 again."

*Tim Ager, IT Director at Tangle Teezer*

## The Product

The Continuum Bonded solution combines multiple 4G services from different carriers into a single high performance Internet connection, with Quality of Service, as standard.

Delivered in a portable and ruggedised unit that can be plugged in the moment it arrives on site, Continuum provides rapid, high performance Internet services to users.
